/ Biography

Rapha MEY is a french-american digital artist based in New York City with a background in web development and design.

Experimenting with code and art since the days of Net Art, his practice focuses on real-time 2D and 3D experiences developed for the browser, often conceived as slow, meditative environments that unfold over extended durations. Through algorithms and controlled randomness, these systems produce varied outcomes while maintaining a coherent and recognizable visual language.

Rapha's work also engages with questions of digital provenance, using the Bitcoin blockchain as a kind of shared memory bank to store personal data since 2018, alongside explorations of concrete and generative poetry that combine the spatial and affective dimensions of language.

His work has been exhibited internationally.

/ Solo Shows

2025

Oct-Nov - TRANSITIONS
Colonna Contemporary - Philadelphia, PA

/ Group Shows

2026

Feb - MIRADAS TANGENTES
ArtLab - Madrid, Spain

2025

Oct - ARROYO BLOSSOM
ArtBlocks - Marfa, TX

Aug - TRYPTICH
RGB_MTL - Montreal, Canada

Aug - BEACONS
BTC Summit - Hong Kong

Feb - The Book of Change
Assembly Winter conference - Helsinki, Finland

Feb - PENUMBRA
NFT Paris conference - Paris, France

2024

Aug - Text Me!
Seattle Museum - Seattle,

Apr - Field Trip
BEEPLE Studios - Charleston, SC

/ Artist Statement

I write code. That's a really bizzare way to make art, when you could pick up a pencil, a brush, Photoshop, or carve away a block of marble.

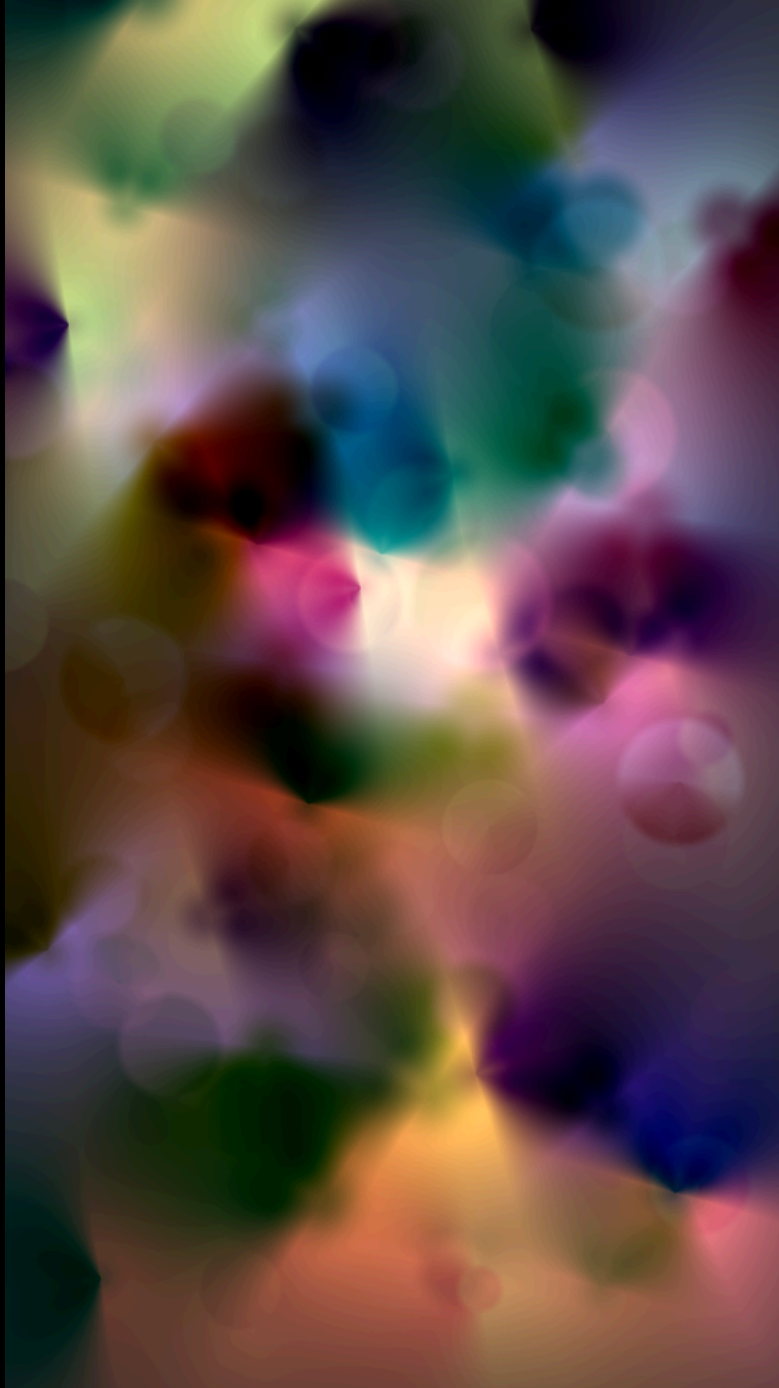

Instead, I carve strings of keywords together and watch the result appear on screen. I've been fascinated with this process for years : the machine doesn't do what you want, it only does what you tell it to do. And believe me, there's usually a big difference between the two!

So what do I tell the machine to do? I can draw 50 squares by hand, but I can't draw 50,000 squares. So that's what I ask: do something that I cannot. Repeat a shape a million times, draw layers of color so thin that each one is practically transparent, and surprise me with unexpected results!

This is the magic of algorithmic art: I must surrender control to find new behaviors and patterns. Somewhere between chaos and order lies that beauty of the accidental, the unforeseen and the emergent.

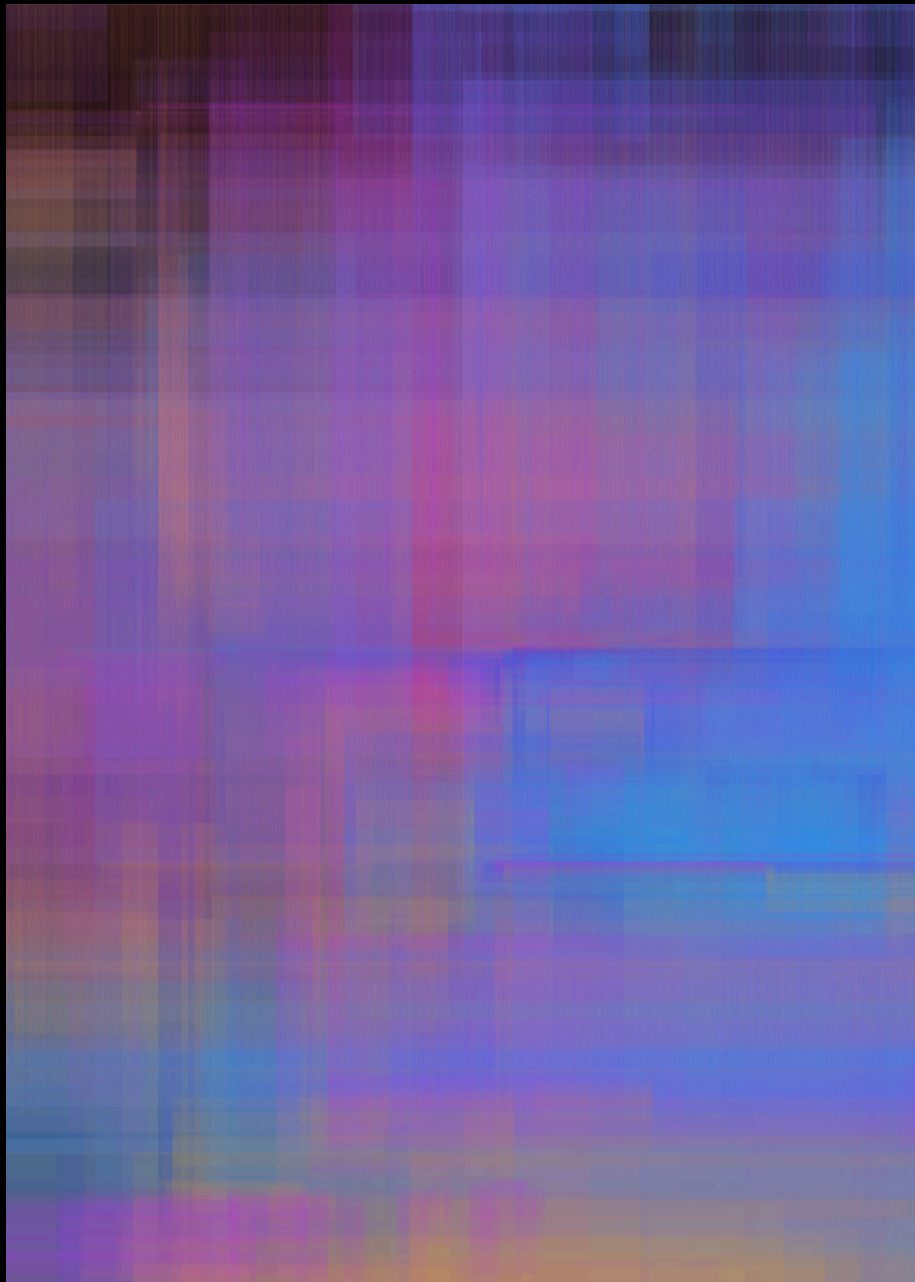

Note on terminology : I use "algorithmic art" instead of the traditional "generative art" to distinguish my practice from art made with "generative AI".

/ Past and Current Works

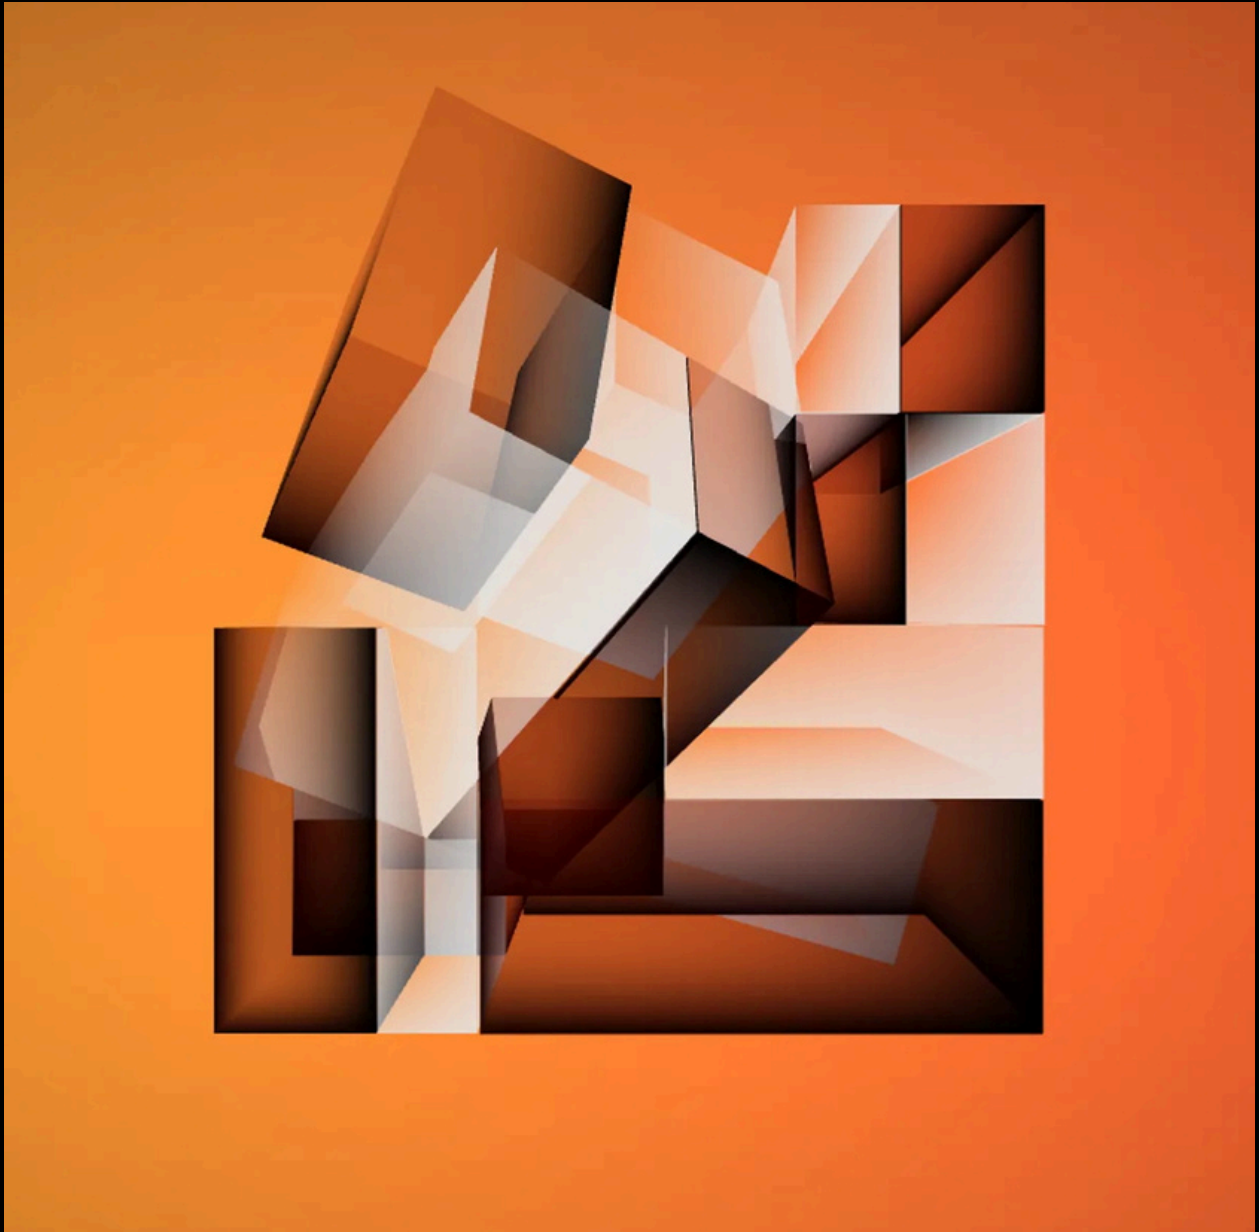

work in progress (2026) - Anisotropy studies

In this animated series, I want to break the symmetry of circular light sources by introducing a preferred, but changing, direction.

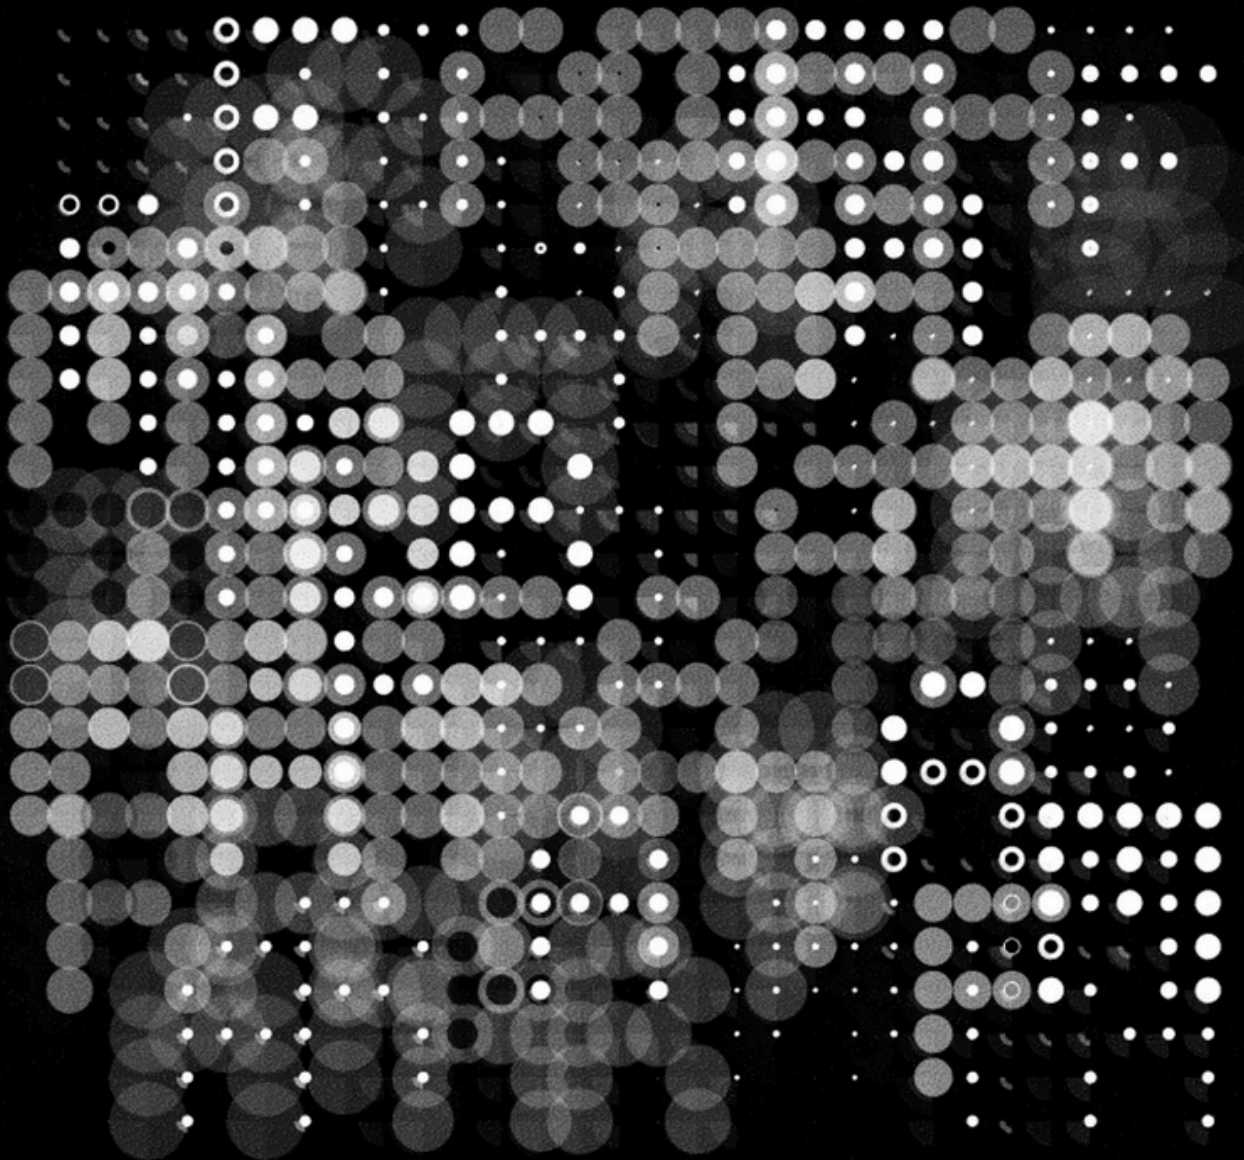

Transition 04 - 2025

In this algorithmic series, printed in large format for my first solo show, I wanted to show how complexity emerges from the simplest form, here a recursive accumulation of almost transparent rectangles.

LEITMOTIV - 2024

In this algorithmic series from 2024, the simple shape of the cube is deconstructed and reconstructed, very slowly, to produce complex arrangement of overlapping bricks.

MARFA 2024 ψ

STACKED

STACKED - 2024

In Stacks, the complexity emerges from the accumulation of layers of discs of various sizes arranged in a grid. Despite the rigidity of the grid, I wanted to show the appeal of dot-matrix characters (that spell M-A-R-F-A) from a purely formal point of view. The title is a nod to Donald JUDD.

Random Access Memory - 2024

Arroyo Blossom - 2025

In Arroyo Blossom, an algorithmic series in collaboration with poet Æther, the theme of memory takes a more collective turn: viewers are asked to choose words that evoke their experience of generative art. This work was presented in Marfa during the Art Blocks weekend.
